

How to store injectable medications (insulin/GLP-1 receptor agonists)

★ It is vitally important that injectable medications be stored under conditions of controlled room temperature. ★

★ How to store the **opened** injectable medications

- Store the injectable medications currently in use at room temperature (less than 30 °C Celsius / 86 °F Fahrenheit).
- Store these medications away from direct sunlight or excessive heat.
- Prevent these medications from freezing.
- Store the medications with their needles removed.

★ How to store **unopened** injectable medications

- Store unopened medications in a refrigerator (2-8 °C Celsius / 35.6-46.4 °F Fahrenheit).
- Store these medications away from the refrigerator evaporator fans in a horizontally position.
- Once frozen, any injectable medication is not to be used.

★ Note the expiration dates on your medications

- The expiration rate is described on the syringe pen or the outer side of its package.

★ Be sure not to leave injectable medications in plain sight

- Care should be taken to store your injectable medications out of reach of others or children.
